EDUCATION

UC SAN DIEGO 2023-2027

- BSc in Cognitive Science
Specialising in Design and Interaction
- BA in Interdisciplinary Computing and the Arts (CS + Art)
- GPA: 3.91
- Resident Assistant at Eighth College
- Research Assistant at Protolab & Systems Neuroscience Lab
- Muir Caledonian (Honors) Society, Computer Science and Engineering Society
- Licensed in Social and Behavioural Research (CITI)

SKILLS

UX RESEARCH & DESIGN

- Behavioral analytics
- Comparative analysis
- User flow evaluation
- Wireframes and Prototypes
- Conversion-focused design

TOOLS

- Creative Cloud Software
- FIGMA and Adobe XD
- Blender
- Unity and Unreal Engine
- HTML, Java, Python
- Microsoft Clarity

WORK EXPERIENCE

Lab Manager and Research Assistant

NOV 2024- PRESENT

Systems Neuroscience Lab at UCSD

- Working with Dr. Douglas Nitz, Professor of Cognitive Science to understand how humans make sense of impossible non-Euclidean and non-metric worlds in a VR setting.
- Creating virtual environments compatible with Unity and Unreal Engine to help understand cognition of navigation.
- Leading and conducting user testing using VR and additional components for cognition experiments with the lab.
- Learning how to use unmanned aerial vehicles for photogrammetry footage to create realistic 3D urban environments.

UX Design Intern

JUNE 2025- AUG 2025

PipingRock Health Products

- Conducted user research on 20+ in-house brands using Microsoft Clarity to identify usability issues and behavioral insights, analysing heatmaps, session replays, and click data to identify underlying issues on the pages.
- Researched and drafted UX/UI improvements across different brand PDPs, homepages, and cart pages to enhance user flow and conversion rates.
- Designed squeeze pages on Adobe XD to improve conversion rates.
- Redesigned the homepage of one brand (Champion's Performance), focusing on usability, accessibility, and engagement.
- Created mockups in Lovable to propose a new article page layout, improving readability and user retention.
- Designed supporting UX elements, including: sticky CTAs, low stock messaging, product bundle layouts

MAVERiC XR Studio Intern

APR 2025- JUNE 2025

Origami Air Co.

- Built a fully immersive virtual reality system from scratch using Unity.
- Learned different techniques and asset creation for level design.
- Created a custom particle system, shader graphs and different VFX sequences using fog, bloom, color grading, and volumetric lighting to create a full sense of immersion for viewers.
- Used user testing, iterating and prototyping techniques for two months before launch of the final product

PROJECTS

- Apocabear-** Conceptualised and designed an inclusive, visual, and robust emergency alert system for elderly and immigrant community to better plan, understand, and act during emergencies.
 - Received an honorable mention in the "Mindshift on Megafires" Design Challenge 2025 hosted by the Design Lab at UCSD.
- Bioluminescence-** Designed and developed an immersive VR world set in a bioluminescent environment using Unity's Universal Render Pipeline with custom unlit materials and particle systems to bring the environment to life while ensuring smooth performance on Quest.
